

Topographical Map: This NYS geodetic survey map shows surface contours increments of 10 ft. The steeper the slope, the closer the contour lines. Hence, note the water side of the Heights, Goat Hill, South Ferry Hills, the Rams, and the high ground north and east of South Midway. Slope steepness is a major factor in determining run-off risk and underground water flows. Note, too, the flat 'wash out' areas of Silver Beach, S Menantic and southern Shorewood.

Note in some areas the shoreline is very faint
